Performance Test Report for Execution of Expiring Batch Job with 30% of Peak enrollments per day

Date: 27th Nov 2019

Author: Anand Babaleshwar

Summary

This report presents the observations and findings of the Expiry batch job execution in which Expiring 6240 enrollments (i.e. 30% of Peak enrollments per day as per workload modelling document is 20800 and 2600/hour)

The objective of this batch job execution was to observe and record the behavior of the batch job for expiring the 6240 booked appointments with existing expired data
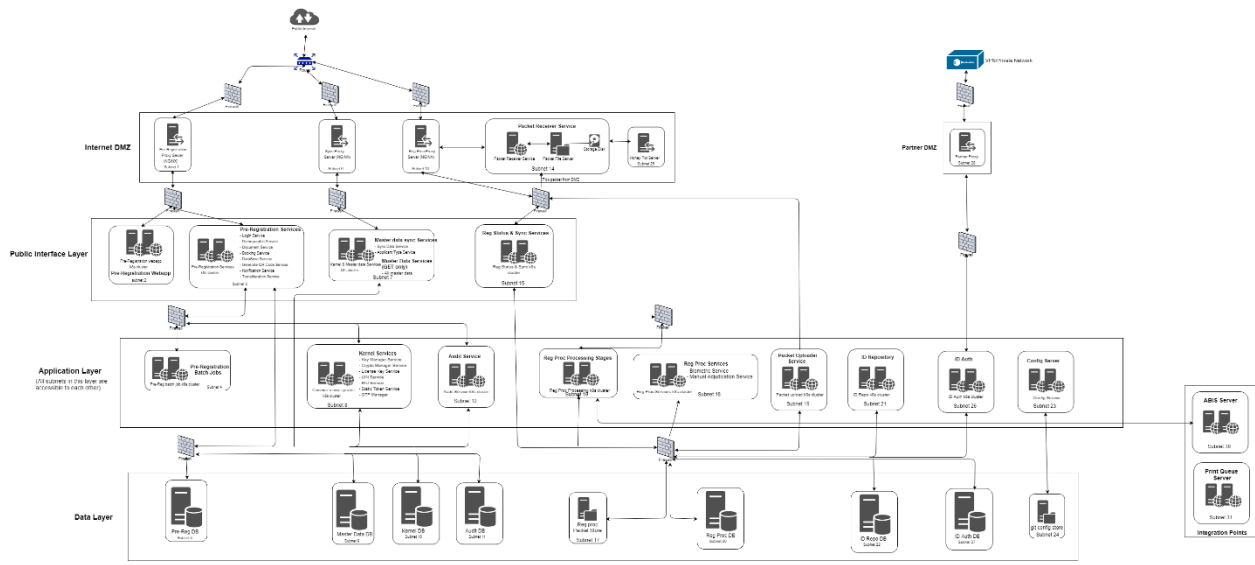

Below are the scenario details:

Batch job execution Name:

Expiring 6240 enrollments (i.e.30% of Peak enrollments per day in workload modelling document is 20800 and 2600/hour)

Steps:

1) Create book appoints test data of 20800 (which is per day enrollments)

2) 30% of the booked appointments (20800) are expired is 6240

3) Run the expiry batch job

4) Calculate the batch job execution time

5) Checking the functionality of batch job

6) Raising a Jira ticket for functionality issues of batch job if any

Test Environment (scaled down of below proposed architecture)

Before running expiry batch job below are the details:

- Total number of Booked appointments =702386
- Total number of records already present with yesterday date =22043
- Total number of records which changed to yesterday's date (26th nov) =6240 (30% of Peak booked appointments)
- Total number of expired appointments currently in DB =41451

Batch job execution status:

instance_id	Create_Time	Start_Time	End_Time	Execution Time	Status
983	2019-11-27 10:21:15.306	2019-11-27 10:21:15.318	2019-11-27 10:21:59.831	00:00:45	COMPLETED*

Batch job completed without errors and it has expired 6240 preg ids in 45 sec

After running expiry batch job execution:

- Total number of Booked appointments = 702386
- Total number of records which changed to yesterday's date (26th Nov) i.e. Total number of expired appointments in DB =6240
- Total number of expired appointments currently in DB=47691(41451+6240)
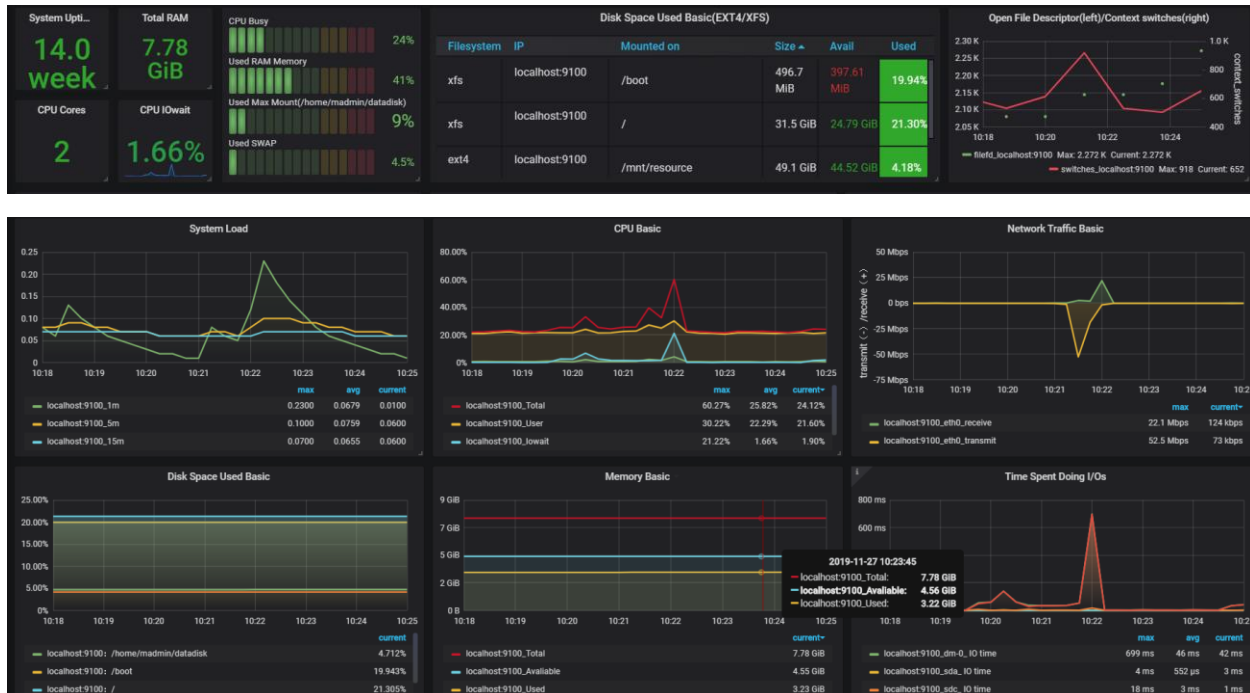

Cluster level node monitoring:

Max Total CPU utilization is 17.42% , No major findings for cluster node utilization

DB level node monitoring:

Max CPU utilization was 60.27% ,No major findings for DB node utilization

Conclusion and Next Steps:

Expiry batch job executed successfully without any errors after defect
https://mosipid.atlassian.net/browse/MOS-29675 fixed and execution time is 45 sec and it
has expired 6240 prereg ids

As per workload modelling we have completed batch job testing with all
scenarios.
